

Video Script: What is the @bortion pill and where do I find it?

Here's a sample script to share medically accurate information about the abortion pill and where to find it. Please tag #carafemBFF or #carafem so we can share your awesome work!

Note: TikTok and other platforms frequently monitor and remove abortion content, which is why we use @bortion here.

- The Supreme Court just overturned Roe v Wade, which means states have the power to decide if @bortion is legal in their state.
- In select states (roughly half of the country) you can legally order the @bortion pill online or get it from a health center like carafem.
- So what even is the @bortion pill? Medication @bortion (aka the @bortion pill) was approved by the FDA in 2000. More than half of all @bortions in the US are with the @bortion pill.
- Technically, a medication @bortion is usually two sets of medications! Mifepristone is the first pill taken during a medication @bortion, and it blocks the hormone progesterone from further developing the pregnancy.
- Four pills of Misoprostol are taken later (there are some choices on how/when people take these) and will cause cramping and bleeding that end the pregnancy.
- These medications are incredibly safe, effective, and you can order them online from carafem or go to one of their clinics in select states!
- Visit carafem.org to learn more.
